

Gloria was born in Viña del Mar, she holds a degree in Acoustic Engineering from Universidad Austral de Chile. Her thesis consisted of the construction and validation of a vibration sensor using a micro-electro-mechanical device (MEMS), by comparing MEMS and a piezoelectric accelerometer sensor for vibration measurements. Gloria joined CECs in early 2014 with the aim to design and implement a database system to manage ground penetrating radar (GPR) data. Currently she is working on the development and implementation of a data management system for better management of all scientific data in the Glaciology laboratory of CECs.
