

Nicolás was born in Molina, Chile. In 2016, he graduated from Geophysics at University of Concepción. His professional practice was in the Center for Climate Science and Resiliency (CR)2, made an analysis in the isotherm 0°C in central Chile. Also, he participated in the third and fourth version of the Congress of Physics Oceanography, Meteorology and Climatology, made it in Chile. In his field work, he has helped in different kind of FONDECYT projects, collaborating with the measurements and capturing data for investigations in Chile. Nicolás joined CECs in December of 2017 to the Glaciology area, for working in the hydrographic analysis with measurements, monitoring and analysis of river flow data.
